Spotlight on vinyl.

Facts you may not know...

A blue PVC pipe is shown on the left, pouring clear water into a clear glass. The water is captured mid-pour, creating a dynamic splash. The background is a dark, heavily textured vinyl floor with a mottled brown and black appearance.

Vinyl transports drinking water into our homes. The largest amount of PVC used in buildings today goes into pipe. Unlike earlier cast iron pipes, PVC is extremely durable and does not corrode. PVC now accounts for 70% of new water pipes being installed underground in North America.

Flooring: *LSI - Shale, Legato*
